Milestone Identification Template

Milestone	List the various activities under each milestone at a high level (you may refer to the 49 process chart)	Map the milestone with the success criteria for the project
Example: Curriculum Development	Identify the training needs, plan the curriculum development including training topics, timelines for development and training delivery, cost of development, cost of training delivery, plan for knowledge checks post-training, plan for resources such as curriculum developers, trainers, etc.,	Employee skill enhancement
1. Curriculum Development	Complete the training needs analysis and define learning objectives. Design the curriculum: modules, content, materials, exercises and knowledge checks. Develop and review the content with subject-matter experts; pilot a module and refine it. Manage scope, schedule and cost of development; get curriculum sign-off.	Employee skill enhancement: curriculum targets the skill gaps identified. Knowledge retention: built-in knowledge checks and reinforcement activities.
2. Training Delivery	Plan and schedule sessions; confirm trainers, venues or online platform, and participants. Prepare materials, tools and communications to participants and managers. Deliver the training sessions; monitor attendance, engagement and quality. Collect participant feedback and manage issues and changes.	Employee skill enhancement: all planned participants complete the training. Knowledge retention: delivery quality and engagement support learning.

Milestone	List the various activities under each milestone at a high level (you may refer to the 49 process chart)	Map the milestone with the success criteria for the project
3. Assessment of Participant Learning Outcomes	Establish baseline results (pre-training assessment). Administer post-training assessments and practical evaluations. Run follow-up retention checks after a set period (e.g., 30-90 days). Analyze results against baseline and report to stakeholders.	Employee skill enhancement: measured improvement versus baseline. Knowledge retention: follow-up results show knowledge is retained.
4. Project Closure and Benefits Review	Obtain stakeholder acceptance of deliverables and the final assessment report. Capture lessons learned and archive project documents. Release resources and close contracts and costs. Hand over materials for ongoing use and recommend improvements.	Employee skill enhancement and knowledge retention confirmed to sponsors. Overall success criteria formally met and signed off.
